Good product, a power adapter would have been even better

By Joe on January 2, 2013

Verified Purchase

I bought the Rikomagic MK802 to use it HD movie player, and for general web surfing activities.

The product was pretty easy to set up - just plug into HDMI port on the back of the TV - connect to a power source and the unit boots up right away. The box came with an extended HDMI cable and a mini USB dongle (for powering the Rikomagic). The instruction manual is pretty light - I suppose the company which makes this probably assumes that if you buy this device then you probably already know a thing or two about Android operating system.

The dual core processor (same as you would find in the Galaxy S2) is more than adequate for the task at hand. There was no issues with HD movie playbacks at all. Sound comes out as it should on my TV and there was no need to tinker with the setup to get that to work, which is nice. I have not played games on it yet but from what I heard, it holds up pretty well for some of the older titles like GTA 3.

Note that the Rikomagic only has one USB port (excluding the mini USB slot for the power adapter), so you will need to get one of those USB port hubs. I bought a cheap 1-4 hub and used one port for connecting my wireless mouse and keyboard receiver unit (surprisingly enough, I have not found a single wireless mouse and keyboard that has not worked yet), one for my joypad and the third and fourth port for portable HDD/USB sticks (where I download my HD movies and music files). Some people connect their webcam as well so I suppose that could be another use for the fourth port.

Loading movies is fairly simple. I basically use the explorer to access files in the portable HDD (I have a 500GB Goflex). The unit comes with two different movie viewer but you can download more from their app stores. [Read more](#)

Rooted and it works pretty good

By K. Dougal on December 7, 2012

Verified Purchase

Pros: I can stream Netflix, play Star Wars Angry Birds and run all the apps I want from Google Play. I like the interface just fine, it is running Jelly Bean which is the latest android OS as of right now 12/7/12.

Cons: The wifi is functional but has an internal antenna and appears to have trouble picking up the signal. I have read that others are finding that the bluetooth dongle/adaptor you may put in it to have a wireless keyboard and mouse fights with the wifi signal and that you should use a usb extension cable to get some distance between the mk802 III and the keyboard/mouse usb adapter.

Overall, it made my "dumb tv", smart and fun to use.

I rooted it so that I could install Droidmote server which allows me to use my android phone as a remote control, to control the mouse on the tv. Due to wifi interference, the droidmote client on my android phone is very laggy as in not useful. Droidmote to laptop works great.

For rooting, see TrailRiderKen's review at [...] and for upgrading to the latest firmware: [...]

Good but not great

By Amazon Customer on December 15, 2012

Verified Purchase

As stated in the product description, this device requires a USB plugin for power. There is no wall plug/transformer provided for AC power. The provided USB cable, for power connection to a USB port on the TV, and the HDMI cable are not long enough to reach my TV USB and HDMI without having the Mini PC device just hanging in the air. I had to plug the Mini PC into an HDMI switch, taking up two plug positions because it is rather wide, and then still get a longer USB cable.

As expected, when I power off my TV, the USB power to the Mini PC goes away. I think this is a good thing since other Mini PC devices are constantly powered on. The downside is that it takes a little while for the Mini PC to boot up.

I had a problem getting my wireless keyboard to work. I had to switch to a Logitech wireless keyboard even though the first one I installed (not a Logitech) had worked with a different Android device. I have not had the same WiFi and wireless keyboard interference problem that another reviewer mentioned.

The device seems to work as well. It seems to be slightly more snappy than other, single core processor, Android Mini PC devices I have used. The cursor is an odd looking pizza pie slice triangle that takes some getting used to.

The delivery was much faster than stated on the Amazon listing.

Overall this seems to be a nice device that provides the Android experience quite well on my TV. I would like to have had a hard wired ethernet port available. Since I have had it installed for only two hours, I will know more in the next few days.

I would recommend this to anyone who wants an dual core Android TV interface as long as they understand the power connection issue.

Really fun small PC, with a few disappointments

By S. Hall on January 7, 2013

Verified Purchase

I love this little PC. It worked right out of the box, AFTER I bought the usb power adapter, and the GearHead keyboard mouse combo, the cheap one for \$19.99 at Fry's. I wanted to stay within an Amazon gift card I received, and I did. It came in at \$96.00 total, which is an excellent deal for a PC. I think. The

3/5

get this device, which has a dual core android 4.1 jelly bean, which is an excellent device for a mini pc. I found that the USB power adapter must have at least 2Amps, so many mobile phone chargers won't work, but the Kindle charger will work, and tablet chargers will probably work.

Everything worked together without any special anything. The mouse/keyboard has a nano 2.4Ghz receiver you plug into the USB port of the MK802 III, which does not work with bluetooth. I found that the 2.4Ghz receiver needed unobstructed access to the mouse or it would show some lag.

When I ordered the MK802 III, I was fuzzy about needing a keyboard or a mouse, and I'd heard about the new android app that would let you control the RikoMagic from your smartphone, so I was thinking I could make do without a mouse. This lead to Disappointment 1: I would have liked the other necessary items listed as "required" in the product details. The requirements weren't clear. Moreover, I totally agree with the reviewer about wishing they had just included a power adapter with the product and added a few more dollars to the total. Some other vendors include the power adapter and a mini mouse keyboard combo, which looks fine, and would have been convenient. I probably would not want a keyboard / mouse included, but I'd want to know that at least a mouse was absolutely needed.

Out of the box, I got three out of 4 bars with it 10 feet from the router, so I used a longer HDMI cable and relocated it to right next to the router and got 4 out of 4 bars. [Read more](#)
